

## HA7V 系列变量柱塞泵 Variable Displacement Pump HA7V

规格 size 20.....500

2.0/5.1 系列 series

额定压力可达 35MPa Nominal pressure 35MPa

峰值压力可达 40MPa Peak pressure 40MPa

### 目 录 Contents

一、型号说明 Ordering Code.....	2	六、恒 功 率 控 制 Constant horsepower control LV.....	8-9
二、结构图 Construction.....	3	七、恒 压 控 制 Constant pressure control DR.....	10-11
三、油液 Hydraulic Fluid.....	4	八、电 气 比 例 控 制 Electrical control EL.....	11-12
四、技术参数 Parameter.....	4-6	九、液 压 控 制 Hydraulic control pressure HD.....	12-13
五、安装注意事项 Installation Notes.....	7	十、元 件 外 形 尺 寸 Unit Dimensions.....	15-20

### 特 点 Features

1、HA7V 斜轴式轴向变量泵，适用于开式回路的静液压驱动

Variable Displacement Pump HA7V widely used for open circuit in hydrostatic transmission

2、适用于行走机械或工业领域

Suitable for walking mechanical or industrial areas

3、缸体与配油盘之间为球面配油，自吸性能好、效率高

Between cylinder and oil distribution plate for spherical oil distribution, excellent oil absorbency、high efficiency

4、耐冲击，长寿命，可靠性高

Resistant to shock, long service life and high reliability

5、外接控制油口多，可灵活加装功能阀

Many external control port to flexible installing of function valve

6、输出流量与驱动转速和排量成正比，在恒定转速下可实现无级变量

Its flow and speed is proportional to the displacement, Its can operate adjust displacement with stepless on constant speed

7、驱动轴能承受径向载荷

Drive shaft capable of accepting radial loading

一、型号说明 Type Code

H	A7V	160	LV	2.0	L	Z	F	O	O
恒源液压 Hengyuan Hydraulic					辅助元件 Auxiliary Equipment				
泵型号 Pump type					无 None O				
变量泵 Variable Displacement Pump A7V					带遥控压力截 with pressure cutoff D 流, 对 LV、EL built-on for LV,EL,HD 和 HD				
排量 Displacement(Vgmin~Vgmax) 规格 Size					遥控恒压控制 constant pressure F remote control				
(0~20.5ml/r) 20					行程限位 Stroke Limiter				
(8.1~28.1ml/r) 28					无 None O				
(0~40ml/r) 40					机械行程限位 Stroke limiter M ( 用于 LV 和 DR) mechanically adjustable (for LV,DR)				
(15.8~54.8ml/r) 55					液压行程限位 Stroke limiter ,hydraulic H ( 用于 LV) (for LV)				
(0~58.5ml/r) 58					油口连接 Pipe Connections

### 三、油 液 Fluid

●油温范围 Temperature Range: -25 ~ 80°C

●粘度范围 Viscosity Range:

$t_{min}$  ..... 10 mm<sup>2</sup>/s

$t_{max}$  ..... (短时 short periods) 1000 mm<sup>2</sup>/s

最佳工作粘度 Opt.operating range: ..... 16 ~ 25 mm/s

油液型号的选择 choose the type of the hydraulic oil:

推荐使用 L-HM46 或 L-HM68

Recommend to use L-HM46 or L-HM68

●液压油的过滤 Filtration of Hydraulic Fluid:

推荐过滤精度为 10μm, 亦可使用 25 ~ 40μm 的,

但使用 10μm 的可延长使用寿命 (降低磨损)

Recommended filtration 10μm. Coarser filtration of 25

To 40μm is possible. However longer service life is

achieved with filtration of 10μm(reduce wear)

●流动方向 Flow direction:

顺时针: S 到 B; 逆时针: S 到 A Clockwise: S to B; Anti-clockwise S to A

### 四、技术参数 Technical Data

●工作压力范围 Operation Pressure Range:

出油口 A 或 B 处的压力 Pressure at ports A or B:

额定压力 Rated pressure .....  $P_n = 35$  MPa

最高压力 Peak pressure .....  $P_{max} = 40$  MPa

吸油口 S 处的绝对压力 Inlet Operation Pressure at port S:

$P_{abs\ min}$  ..... 0.08 MPa

$P_{abs\ max}$  ..... 0.2 MPa

●参数关系 Parameter relations

$$\text{流量 Flow} \quad q_v = \frac{V_g \times n \times \eta_v}{1000} \quad [\text{L/min}]$$

$$\text{驱动扭矩 Drive Torque} \quad T = \frac{1.59 \times V_g \times \Delta_p}{10 \times \eta_{mh}} = \frac{V_g \times \Delta_p}{20 \times \pi \times \eta_{mh}} \quad [\text{N.m}]$$

$$\text{驱动功率 Drive Power} \quad P = \frac{T \times n}{9549} = \frac{2\pi \times T \times n}{60000} = \frac{q_v \times \Delta_p}{600 \times \eta} \quad [\text{kW}]$$

$V_g$  = 每转几何排量 [cm<sup>3</sup>]

Geometry displacement each rotate

$\Delta_p$  = 压差 [bar]

Pressure drop/differential

$n$  = 转速 [rpm]

Rotary speed

$\eta_v$  = 容积效率

Cubage's efficiency

$\eta_{mh}$  = 机械—液压效率

Mechanical-Hydraulic efficiency

$\eta_t$  = 总效率 ( $\eta_t = \eta_v \times \eta_{mh}$ )

Overall efficiency

**技术参数表 ( 理论值, 未考虑机械效率与容积效率 )**

 Technical data Form(theoretical values,without considering  $\eta_{mh}$  and  $\eta_v$ )

规格 Size	20	28	40	55	58	80	78	107	117	160	250	355	500

重量 Weight (kg)	19	19	28	28	44	44	53	53	76	76	105	165	245

注:

 ①所示值为吸油口 S 的绝对压力 ,且在  $V_{gmax}$  用矿物油工作时。

②以容积效率为 97% 计算所得。

③在各种工作状态下泵转速均不得超过吸油口 S 在 0.15MPa 下的最高转速。但对  $V_{gmin}>0$  的规格: 28-20、55-40、80-58、107-78、160-117, 可通过减小排量 ( $V_g < V_{gmax}$ ) 与维持最大流量的方法, 使最高转速提高到对应  $V_{gmin}=0$  的那些规格的转速。例: 规格为 28,  $V_{gmax}=28.1ml/r$ , 将排量减小到 20.5ml/r, 保持最大流量为 94(L/min) 前提下, 对应最高转速可由 3600r/min, 提高到 4750r/min。

Note:

 ①The values shown are valid for  $V_{gmax}$ ,with an absolute pressure at suction inlet S and when operated on mineral oil.

②Calculated with a volumetric efficiency of 97%.

③Pump's speed don't exceed the permissible max. speed at 0.15MPa in suction S on those sizes with  $V_{gmin}>0$ ,however the maximum speeds can be increased to the values for those sizes with  $V_{gmin}=0$  by reducing the displacement( $V_g < V_{gmax}$ ) and maintaining max flow,the relevant sizes are 28-20、55-40、80-58、107-78、160-117、for example size 28, $V_{gmax}=28.1ml/r$ ,reduced the displacement to 20.5ml/r and keep the max flow is 94L/min,the max speed can be from 3600r/min to increase 4750r/min.

● 允许转速  $n_{perm}$  和吸油口压力  $P_{abs}$  可由诺模图确定，不过必须考虑最高转速（见参数表）及最低和最高吸油压力。

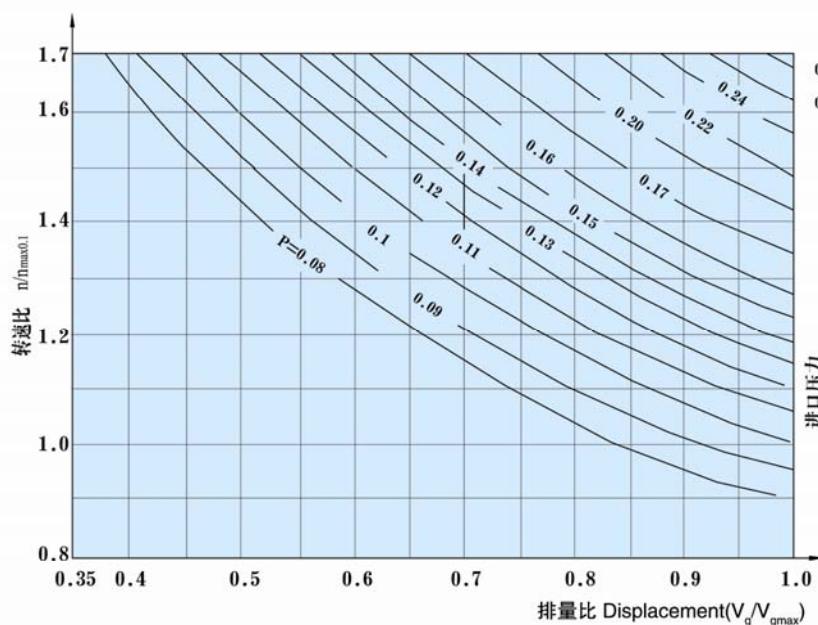

● Permissible speed  $n_{perm}$  and suction pressure  $P_{abs}$  can be read from the nomograph. However, the max speeds(see table)and min,nad max-suction pressure must be taken into account.

例：给定：规格 55，转速 2700r/min,  
求：吸油口 S 处的绝对压力  
解：从  $n_{perm}=2700$ r/min 与 规格 55 两点连直线 I 交线  
H 于 A 点，从 A 点向 B 点（开式回路）画直线 H，  
得出： $P_{abs}=0.117$ MPa

Example  
Given:size 55,Drive speed 2700r/min,  
Required:pressure  $P_{abs}$  at the suction Inlet S  
Solution:Line I on scale  $n_{perm}$  drawn towards size  
55 crosses line H at point A.line II from point A to  
point B(open circuit)gives  
the result: $P_{abs}=0.117$ MPa

● 规格 250~500 吸油口 S 处的绝对压力与转速增加、排量减小值的计算  
Size 250~500 Calculation of Inlet Pressure  $P_{abs}$  at Suction Inlet S and of reduction in Displacement at Increased Speeds

示例：  
给定：规格 500，驱动转速 1320r/min  
求：吸油口 S 的压力  $P_{abs}$   
解：转速比

$$\frac{n}{n_{max0.1}} = \frac{1320}{1200} = 1.1$$

在最大摆角下给出  $P_{abs}=0.12$ MPa  
如果对本例说仅在  $P_{abs}=0.1$ MPa 时能自流，则排  
量须减小到 87.6%。

Example:  
Given:Size500, Drive speed 1320rpm  
Required:pressure  $P_{abs}$  at suction inlet s  
Solution:

$$\text{speed ratio } \frac{n}{n_{max0.1}} = \frac{1320}{1200} = 1.1$$

gives an inlet pressure of  $P_{abs}=0.12$ MPa at full  
swivel.

If for example free flow is only possible with  
 $P_{abs}=0.1$ MPa, the displacement must be  
reduced to 87.6%.

## 五、安装注意事项 Install Caution

### ● 安装位置 Mounting position:

任选，泵内必须充满液压油；当油泵装在油箱里时油口 R 的堵塞应取下，此油口应在顶部。为减小噪音油口应旋入 90° 弯头。  
 Optional.Pump's housing must be filled with oil;When Mounting within a-tank the plug must be removed from port R and this port must be at the top. 90° pipe bend to be screwed in.

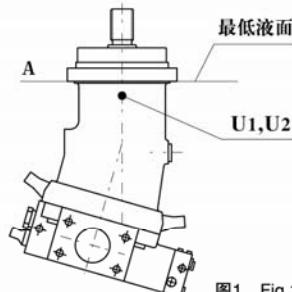

图1 Fig.1

装在油箱里时，油口 U1, U2 和 R 的堵塞应取下；当装在油箱外面时，泵在启动前必须在油口 U1 或 U2 排气。

### ● 驱动轴向上的垂直安装 Drive Shaft Up Vertical Setting

对此必须订货带有 U1 和 U2 的型号（用文字说明：“带油口 U1 和 U2”）。最低液面不得低于“A”线，如图 1 所示。

For this case a model with ports U1 and U2 must be ordered(indicate In clear text: "with ports U1 and U2" ).The minimum oil level must not Fall below the "A" line,as shown in Fig.1.

### ● 安装在油箱顶部 Mounting on top of oil tank

A7V 变量泵装于油箱顶部的安装为特殊安装，只能在特定条件下实现。

1) 带各种控制的油泵，只能在泵处于最大摆角 ( $V_{gmax}$ ) 时启动，对调节从最小排量  $V_{gmin}$  开始的泵 ( $V_{gmin}=0$  的油泵)，最小流量的限位螺钉必须调到最小流量  $\geq$  最大流量  $V_{gmax} \times 5\%$  处，防止油泵在零流量运转，使吸油管放空。

2) 安装在油箱顶部时，订货时需用文字说明“用于油箱上面安装”。

3) 油泵吸油口须在上方，且吸油管应尽可能短，管端至最低液面应低于 200mm，吸油管内应保证流速在 0.8 ~ 1.0m/s 之间。

安装示意图见图 2

Mounting of the A7V pump above tank must be considered as a special pump installation and should only be realized under specific conditions

1)With various control device,pump's angel is max.( $V_{gmax}$ ) before start. Further to adjustment form Vgmin before start( $V_{gmin}=0$ ).The min.flow screw limiter must be operation at Q=0

2)Pump equipped at top of oil tank,when ordering need description "use for set on oil tank" .

3)Pump's suction port should be located up. And also the suction pipe is possible shorter. The pipe end should be low 200mm than oil. The flow speed in suction pipe should keep speed between 0.8 ~ 1.0m/s. Mounting as Fig.2.

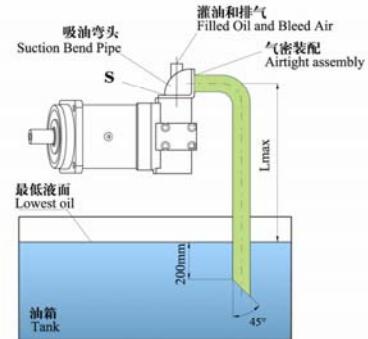

图2 Fig.2

A7V 变量泵 2.0 系列，安装在油箱顶部，各规格转速、管长及对应内径表：

A7V pump 2.0 series,mounting on top of oil tank,different Size and speed 、 pipe length and watch for inner Diameter

规格 Size	最高转速 Max.speed $n_{max}(r/min)$	吸油管最大长度 Max.length of suction pipe $L_{max}(mm)$	在流速 $V=0.9m/s$ 和 $V_{gmax}$ 下算出的吸油管内径 ( mm ) Calculated suction pipe(mm) at flow velocity=0.9m/s and $V_{gmax}$	
			速度 speed $n_{max}(r/min)$	速度 speed $n=1450max(r/min)$
20	3610	600	41.8	26.5
28	2660	600	42	31
40	3040	750	53.6	37
55	2240	750	53.8	43.3
58	2700	750	61.3	45
80	2015	750	61.6	52
78	2410	750	66.6	51.6
107	1800	750	67.5	60.5
117	2125	850	76.6	63.3
160	1565	850	77	74

## 六、恒功率控制 LV Constant Horsepower Control

LV 控制是输入转速不变时，根据负载压力来控制流量，使油泵输出的液压功率恒定即：

$$P = \Delta P \times Q / 60 = \text{常数}$$

式中：P 功率 (kW)、 $\Delta P$  压差 (MPa)、Q 流量 (L/min) 工作压力作用在先导阀芯上，通过导杆压向控制起点调节弹簧，使先导油进入变量活塞，油泵的摆角从  $V_{g\max}$  向  $V_{g\min}$  摆动，使供油量减小 (参见第 3 页结构剖视图)。

LV Constant horsepower control regulates flow in relation to pressure and makes out-put power constant that is:

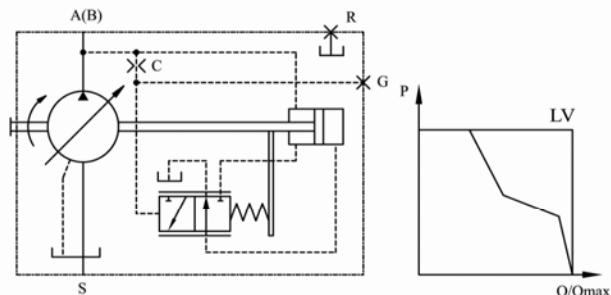

$$P = \Delta P \times Q / 60 = \text{Constance}$$

P:Power(kW)、 $\Delta P$ :Pressure difference between input and output(MPa)、Q:Flow(L/min),Hydraulic pilot force acts on a side of pilot piston.When it overcomes a pilot spring force arranged on the other side of the pilot piston,the pilot oil is fed into the cave of control piston.The pump swivel angle from  $V_{g\max}$  to  $V_{g\min}$  swing.Then the displacement will be reduced(Viewed on Page three Section).

### ●控制起点为 5MPa 的恒功率控制 Start of control at 5MPa

通过油口 G 及节流口 C 可以叠加 HP 控制

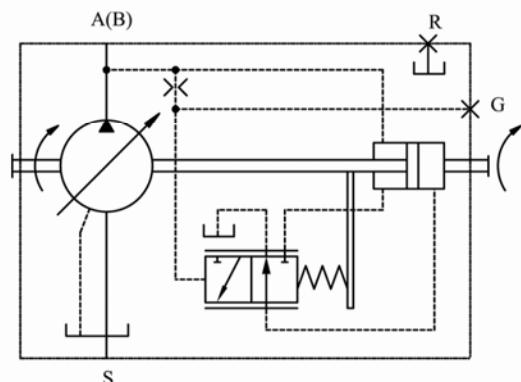

Through port G via throttle port C can carry on high pressure control(summation HP control)

### ●带机械行程限位器的恒功率控制 Constant HP control with stroke limiter

借助于机械行程限位位置，可以无级改变或限制最大排量，根据需要调节范围可从  $V_{g\max}$  到  $V_{g\min}$ 。

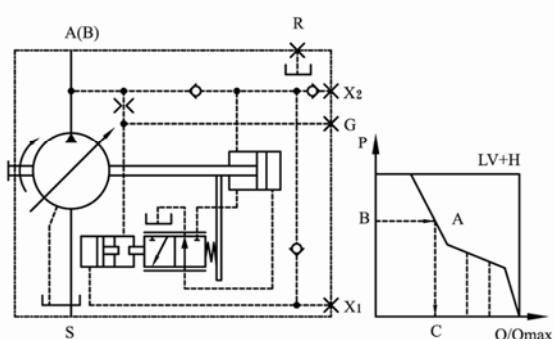

By means of a mechanical stroke limiter,The max,dispacement can be infinitely varicd or limited,Adjusted range from  $V_{g\max}$  to  $V_{g\min}$ .

### ●带液压行程限位器的恒功率控制 Constant HP control with hydraulic stroke limiter

液压行程限位器需要至少工作压力 10% 的先导压力 (X1 口)，对所有规格 X1 口的最大允许压力为 20MPa。如要限制工作压力小于 5MPa 时的流量，则需在油口 X2 处加入不小于 5MPa 的供油压力，这时在油口 X1 需要的压力为  $5 \times 10\% = 0.5$  (MPa)。

A pilot pressure(port X1)of at least 10% of the operating pressure is required for the hydraulic stroke limiter,max.permissible pressure at port X1=20MPa(for all sizes). If it is required to limit the flow at an operating pressure < 5MPa then a boost pressure of min.5MPa must be applied port X2(at port X1 then,min,10\% = 0.5MPa).

### ●带压力截流的恒功率控制

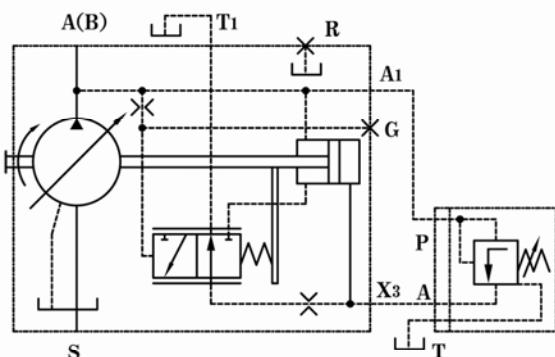

#### Constant HP control with pressure cut-off

适用于  $V_{gmin}=0$  的所有规格压力截流是在恒功率控制基础上叠加一个恒压控制，它借助于顺序阀来实现。当压力达到设定压力的最高值时（调节范围到 31.5MPa），顺序阀打开，流量便自动减小到  $Q=0$ 。

Be used for all kinds of size  $V_{gmin}=0$ , Pressure cut-off is base on constant horsepower control carry on a constant pressure control. It realized operating by order valve. When pressure up to setting pressure(max),(adjusting pressure range to 31.5MPa),the order valve will be opened,then the flow will be reduced to  $Q=0$ .

顺序阀与泵分开安装 规格 20~117

Order valve and pump separately fixed.Size 20~117

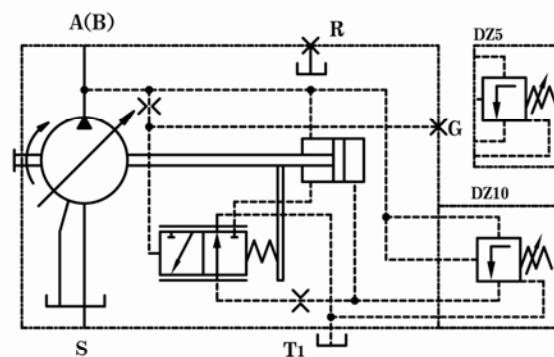

DZ5 用于规格 250, DZ10 用于规格 355~500

在零位连续工作请见恒压 DR 控制

注意：顺序阀油口 T 与先导阀油口 T1 必须直接通油箱（冷却器）。

顺序阀与泵分开安装 规格 250~500

Order valve and pump separately fixed.Size 250~500

DZ5 used for size 250,DZ10 used for size 355~500

Continous operation in zero position please view the constant pressure control DR

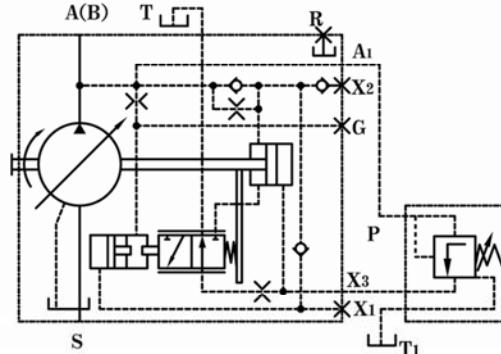

Note: Order valve port T and pilot valve port T1 must be connected with oil tank(cooker).

### ●带压力截流（遥控）和液压行程限位的恒功率控制

#### Constant HP control with pressure cut-off(remote) and hydraulic stroke limiter

顺序阀与泵分开安装，它可以装在底板上任何适当的部位（遥控），连接单管最长不得超过 5m，顺序阀与底板须单独订货。

The sequence valve is mounted separately from the pump in any suitable location on a subplate(remote control),The max/single pipe length must not exceed 5m,Order sequence valve and subplate separately.

### ●带压力截流和液压行程限位的恒功率控制

#### Constant HP control with pressure cut-off and hydraulic stroke limiter

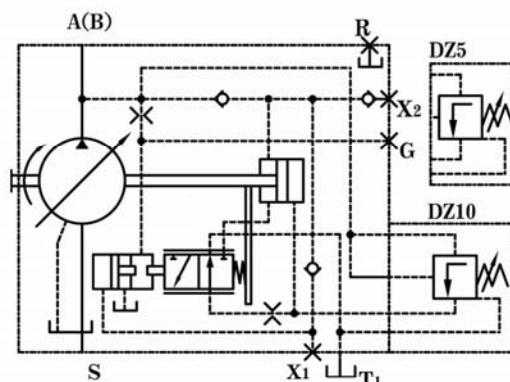

A,B	工作油口	Perating port
G	叠加 HP 控制的油口	Summation HP control port
R	排气口	Port o drain air
S	吸油口	Suction port
T1	先导油回油口	Pilot port
X1	先导压力口	Pilot pressure
X2	遥控压力口	Remote pressure
A1, X3	遥控阀油口	Ports for remote control valve

顺序阀直接装在泵上，规格 250~500

DZ5 用于规格 250, DZ10 用于规格 355~500

Order valve fixed on pump directly Size 250~500

DZ5 used for size 250.DZ10 used for size 355~500

## 七、恒压控制 DR Constant Pressure Control DR

恒压控制是在所控制的范围内，保持系统压力恒定不受油泵流量变化的影响，变量泵仅根据工作负载所需供应流量，当工作压力超过设定压力时，油泵会自动将摆角调小使供油量减少。标准型是所需压力在泵上设定（阀内装），而另一种用于遥控型号是将所需的压力单独设在顺序阀上。

The constant pressure control remains the pressure in a hydraulic system constant within its control range in spite of changing pump flow requirements. The variable pump supplies only the volume of fluid required by the services. Should operating pressure exceed the set pressure, the pump is automatically swivelled back to a smaller angle. The required pressure is set either directly at the pump (valve built-in, standard model), or at the separate sequence valve for the model with remote control.

压力设定范围：标准型 5~35MPa、遥控型 5~31.5MPa。

规格 Size	20~117	250~500
P <sub>max</sub> (MPa)	1	1.4

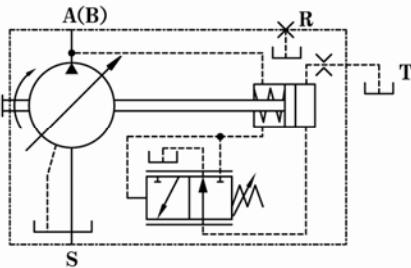

Pressure Setting Range:

Standard model: Set pressure from 5MPa to 35MPa.

Remote model: Set pressure from 5MPa to 31.5MPa.

### ●DR 恒压变量 ( 阀内装 ), 标准型

Constant pressure control (valve built-in), Standard

注：顺序阀和底板单独订货。

顺序阀油口 T 须单独通油箱 ( 冷却器 )。

系统中所装的高压保护溢流阀的压力须设定比恒压控制的设定值高 2MPa。

遥控油管最大长度不得超过 5m。

Note: Order sequence valve and subplate separately.

Port T from the sequence valve must be piped separately to tank A pressure relief valve installed in the system for protection of the max. pressure must be set 2MPa above the setting of the constant pressure control.

The max. single pipe length should not exceed 5m.

### ●并联工作 Parallel Operation

并联工作：几台 A7V 恒压变量泵并联工作时，其恒压特性曲线的  $\Delta P=1.5\text{MPa}$ 。关联工作时，每台泵需有各自的顺序阀，在订货时请注明“并联工作”。

For parallel operation of several A7V pumps with constant pressure control. A steeper curve is used for the constant pressure control ( $\Delta P=1.5\text{MPa}$ ).

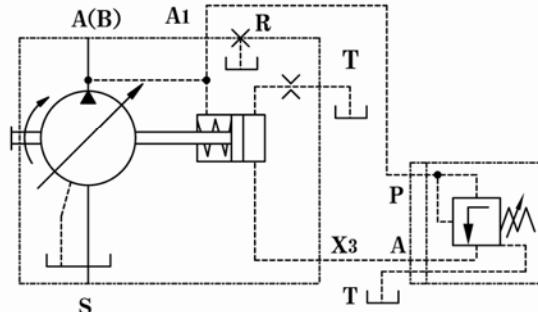

Please indicate this requirement in text after the type code when ordering “parallel operation” .

### ●行程限位 Stroke Limiter

借助于机械行程限位器可把最大排量无级地控制在  $V_{g\max}-V_{g\min}$  之间，详见 LV 变量。

### ●DR 恒压变量，遥控型

Constant pressure control ,remote

规格 20~117 的调节时间

Size 20~117 Adjustment times

规格 Size	20	40	58	78	117
$V_{g\min}-V_{g\max}$ te(s) 卸压 pressure unloading 35~5MPa	0.16	0.2	0.25	0.25	0.3
$V_{g\min}-V_{g\max}$ te(s) 回升 pressure built-up 5~35MPa	0.03	0.04	0.05	0.05	0.06

对于遥控所需时间是上表中时间的 3 倍

The valves in the table are increased by 3 times.

A,B	工作油口	Perating port
R	排气口	Port o drain air
S	吸油口	Suction port
T	先导油回油口	Pilot port
A1,X3	遥控阀油口	Ports for remote control valve

The max. displacement can be steplessly limited between  $V_{g\max}$  to  $V_{g\min}$  by means of a mechanical stroke limiter. For details see control device LV.

### ●零行程连续工作

#### Contionous Operation in zero position

在油泵转速为 1450r/min 情况下，泵壳体内不外加油散热，在零行程连续工作时间、最高压力及允许温度表：

The indicated values applicable at the pump speed of 1450r/min.zero stroke operation without flushing of housing.

短时间运转 Short periods < 10min		长时间运转 Long periods	
最高允许压力 Max.pressure	最高允许温度 Max.Temperature	最高允许压力 Max.pressure	最高允许温度 Max.Temperature
P <sub>max</sub> (MPa) 31.5	t <sub>max</sub> (°C) 50	P <sub>max</sub> (MPa) 20	t <sub>max</sub> (°C) 50

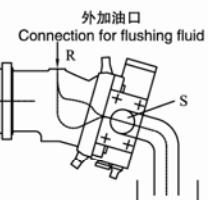

注：当把 A7V 泵装于油箱顶部在 P<sub>max</sub> 为 31.5MPa 下长时间零行程工作时，必需提供≥上表对应规格的流量对壳体冲洗。

Note:When mounting the A7V on top of tank and at zero stroke operation for longer periods of time at pressure up to P<sub>max</sub> 31.5MPa a min.following to flushing flow as indicated for each size in the above table must be set instead of case flushing.

### 壳体外加油散热的零行程工作

#### Zero stroke operation with flushing of housing

长时间运转 Long periods	
最高允许压力 Max.pressure	最高允许温度 Max.Temperature
P <sub>max</sub> (MPa) 31.5	t <sub>max</sub> (°C) 50

规格 Size	20	40	58	78	117	250	355	500
散热流量 (L/min) Flushing flow	2	4	6	8	12	12.5	16	25

外加油的油温需小于油箱油温。

Temperature of flushing fluid ≤ tank temperature.

## 八、电控比例控制 EL Electric Proportional Control EL

电控比例控制可以无级地按程序控制泵的排量。泵排量与电磁铁吸力成正比，即与电磁铁的电流强度成正比。

对于规格 20~160

控制电磁铁要一个电压为 24V ( 12V )，电流为 300~630mA (600~1260mA) 的直流电源。

控制起点约 300mA(600mA)

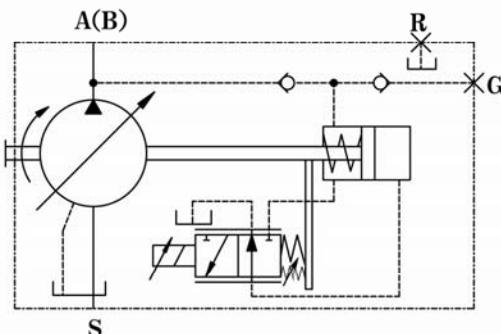

控制终点约 630mA(1260mA)。

对于规格 250~500

控制电磁铁的电压为 24V，电流为 350~800mA 的直流电源。

控制起点约 350mA

控制终点约 800mA，调节从 V<sub>gmin</sub> 到 V<sub>gmax</sub>，如需反向控制 (V<sub>gmax</sub> 到 V<sub>gmin</sub>) 请向我公司询问。如泵在零位起动或工作压力 < 4MPa，则油口 G 须有 4MPa 的先导压力。

The electric control permits stepless and programmable adjustment of the pump displacement. pump displacement is proportional to the solenoid force,i.e,the strength of solenoid current.

For to size20~160

Control solenoid valve need a DC 24V(12V)and current 300~630mA(600~1260mA).

Start of control current apporx.300mA(600mA)

End of cocontrol current apporx.630mA(1260mA)

For to size250~500

Control solenoid valve need a DC 24V and current 350~800mA

Start of control current apporx.350mA.

End of control current apporx.800mA

Control adjust from V<sub>gmax</sub> if need anti-control(from V<sub>gmax</sub> to V<sub>gmin</sub>)please inquiry from HengYuan company.  
If pump is to be moved out of the zero position(Vg=0) or the operating pressure < 4MPa,a pilot pressure of 4MPa is necessary at port G.

### ●调节时间 Time For Adjustment

规格 Size	20 28	40 55	58 80	78 107	117 160
V <sub>gmin</sub> -V <sub>gmax</sub> t <sub>min</sub> (s)	0.16	0.2	0.25	0.25	0.3
V <sub>gmax</sub> -V <sub>gmin</sub> t <sub>min</sub> (s)	0.12	0.16	0.2	0.2	0.25

注：表内所示时间是在工作压力 P<sub>o</sub>=20MPa 时成立。

Note:The viewed time in form is pump' s operating pressure P<sub>o</sub>=20MPa.

### ●滞后量 Hysteresis

由于电气 / 液压控制( 对  $V_{g\min}$  到  $V_{g\max}$  的整个调节范围内 ) 在控制中约有  $\pm 2.5\sim 4\%$  的滞后量, 当从同一方向起动时, 泵位置的重复精度约为 2~4%。

注: 只有在使用矿物油且在油箱里的最高油温不大于 80°C 时, 才可以将带有 EL 控制的泵装在油箱内。(若将泵浸在油中, 请订货时加以说明)

A hysteresis of  $\pm 2.5\sim 4\%$ (approx.) is present in the control because of the electric/hydraulic control(referred to the complete adjustment range  $V_{g\min}$  to  $V_{g\max}$ ). The repeatability of the pump position.when starting from the same direction is around 2~4%.

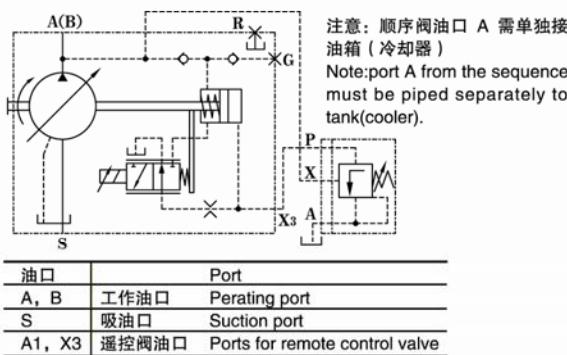

Note:mounting of the pump with EL control inside the oil tank is possible,only when using mineral hydraulic oils and with a max.oli temperature in the tank of 80°C.(If the pump is to be submerged in oil,please indicate in cleat text when ordering)

### ●带压力截流的电气比例控制 EL Electric control EL with pressure cut-off

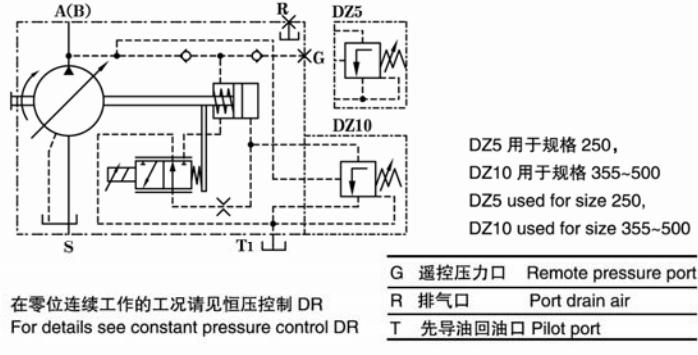

用于所有  $V_{g\min}=0$  规格, 说明见 HD 控制, 顺序阀和底板需单独订货。

For all sizes with  $V_{g\min}=0$ , for description see control device HD,Order sequence valve and subplate separately.

用于规格 20~160 For size 20~160

用于规格 250~500 For size 250~500

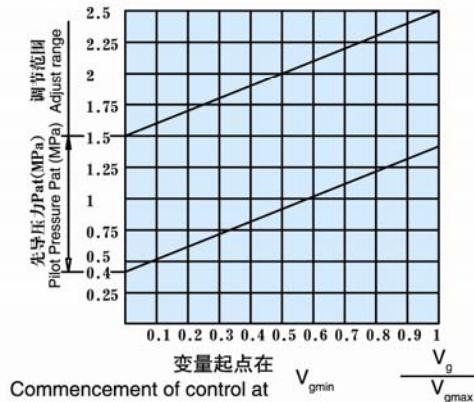

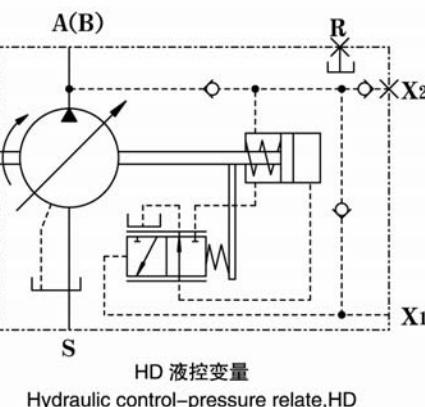

### 九、液压控制 HD Hydraulic control, pressure related HD

液压控制是按先导压力大小无级地调节泵的排量, 调节量与油口 X1 的先导压力值成正比。当用 HD 作 2 位变量时 ( $V_{g\min}$  到  $V_{g\max}$  ), 油口 X1 的先导压力不得超过 4MPa, 调节从  $V_{g\min}$  到  $V_{g\max}$  。在整个变量范围内 ( $V_{g\min}$  到  $V_{g\max}$  ) 先导压力升高 1MPa, 变量起点的设定范围从 0.4~1.5MPa, 所需的控制油从高压回路取得。要求最低的工作压力为 4MPa, 当工作压力低于此值时, 需在油口 X2 接入 4MPa 的先导压力。先导 X1 处的供油量约为 0.5L/min, 以补充此处的泄漏。

The hydraulic control, pressure related, permits the stepless adjustment of the pump displacement in relation to pilot pressure, Adjustment is proportional to the pilot pressure at port X1. When using the HD control as 2-Position control( $V_{g\min}$  to  $V_{g\max}$ ),the pilot oil pressure on port X1 must not exceed 4MPa.

Adjustment is from  $V_{g\min}$  to  $V_{g\max}$

The increase in pilot pressure over the complete adjustment range is 1MPa.The setting range for commencement of control is 0.4MPa to 1.5MPa. The necessary control oil is taken from the high pressure circuit, and a minimum operating pressure of 4MPa is required. If necessary apply pilot pressure of 4MPa and port X2. The oil flow at pilot X1 is approx 0.5L/min.

### ●带压力截流的液控变量 HD Hydraulic control,pressure related with cut-off

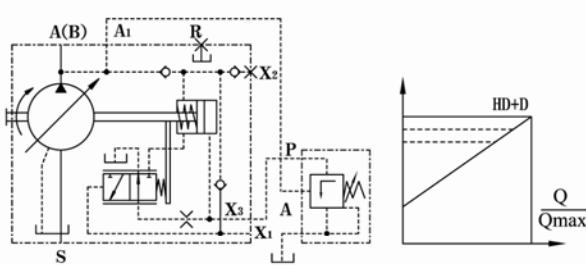

用于所有  $V_{gmin}=0$  规格

带压力截流时把流量限制成高压的函数，以便不超过预置的工作压力，此功能由顺序阀来实现。当工作压力达到设定值 31.5MPa 时，该阀打开，使油泵流量自动下降到  $Q=0$ 。当顺序阀、泵单独安装时，可借助于底板装于任何合适的部位进行控制，最大单管长度不得大于 5m。顺序阀与底板需单独订货。

For all sizes with  $V_{gmin}=0$

The pressure cut-off serves to limit the flow as a function of high pressure so that a predetermined operating pressure is not exceeded. This function is not carried out by a sequence valve. On reaching the set max. pressure (adjustment range up to 31.5MPa), the valve opens and the flow is automatically reduced to  $Q=0$ . The sequence valve is mounted separately from the pump in any suitable location by means of a single pipe length should not exceed 5 m. Order sequence valve and subplate separately.

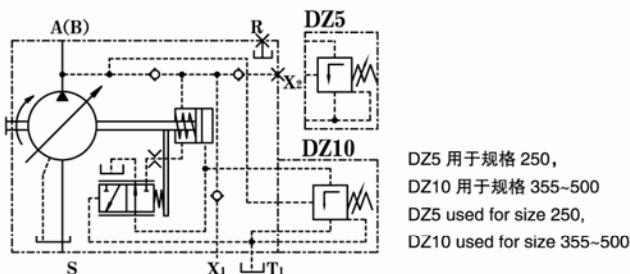

用于规格 20~117, For Sizes 20~117

注意：顺序阀油口 A 需单独接油箱（冷却器）

Note: port A from the sequence must be piped separately to tank(cooler).

用于规格 250~500, For Sizes 250~500

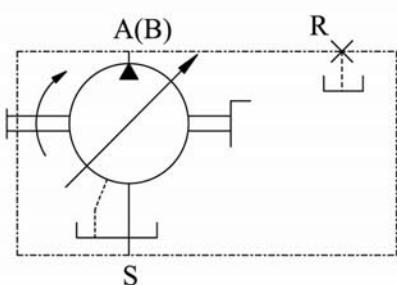

DZ5 用于规格 250,  
DZ10 用于规格 355~500  
DZ5 used for size 250,  
DZ10 used for size 355~500

在零位连续工作的工况请见恒压控制 DR  
For details see constant pressure control DR

### ●手动控制 MA Manual Control MA

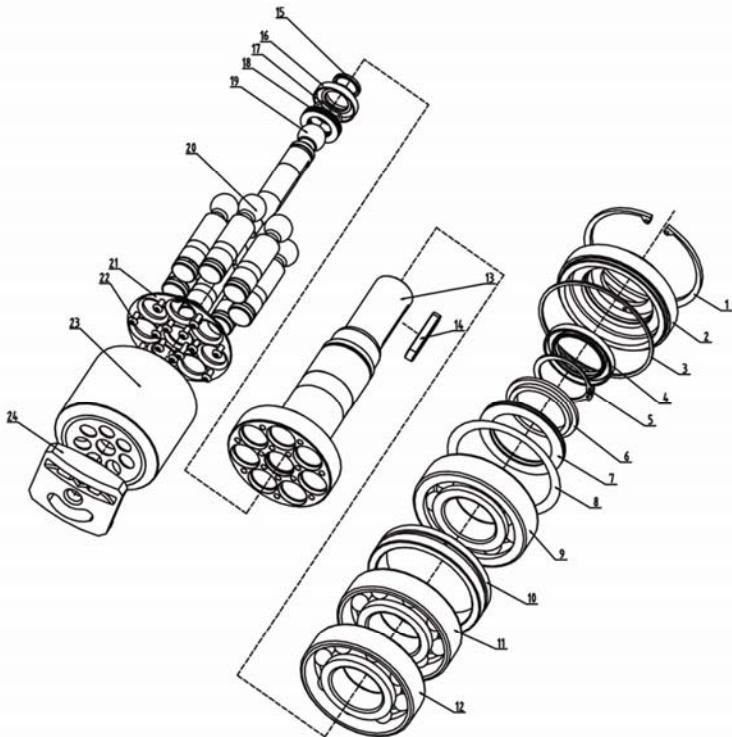

通过转动手轮借助于螺杆使变量活塞沿轴向运动，并经作用销杆使配油盘沿其滑动面运动，从而使泵在  $V_{gmin}$  至  $V_{gmax}$  范围内无级地改变其排量。

By turning the handwheel, a piston is moved in an axial direction by means of a threaded spidle. A carrier pin moves the port plate on its sliding plate, thus permitting stepless variation of the pump displacement a the range  $V_{gmin}$  to  $V_{gmax}$ .
